# WHY YOU NEED TO BACKUP YOUR DATA?

- Avoid losing any data.
- Be safe when system failure happens.
- Always up to date with your latest data.
- Fast recovery time.
- Moving to another hardware is easier.
- Backup your data in more than one place.
- Automatically backup will be taken daily.
- Backup solution cannot be infected by viruses.

## SYSTEM SOLUTION OVERVIEW

- The system will work in Virtual Environment.
- Backup options in more than one place.
- one-time payment, no subscription is needed.
- one-time configuration.
- Backup's working automatically.
- Notifications sent to the email when the backup succeeds or fails.
- Multiple backup's for the same image (1-7 days as maximum)
- If the server is damaged your backups can be restored to new hardware
- when the system is infected or damaged all backups will be safe.

## BACKUP SOLUTION

- Local disks to backup data internally.
- USB external disk to backup data externally.

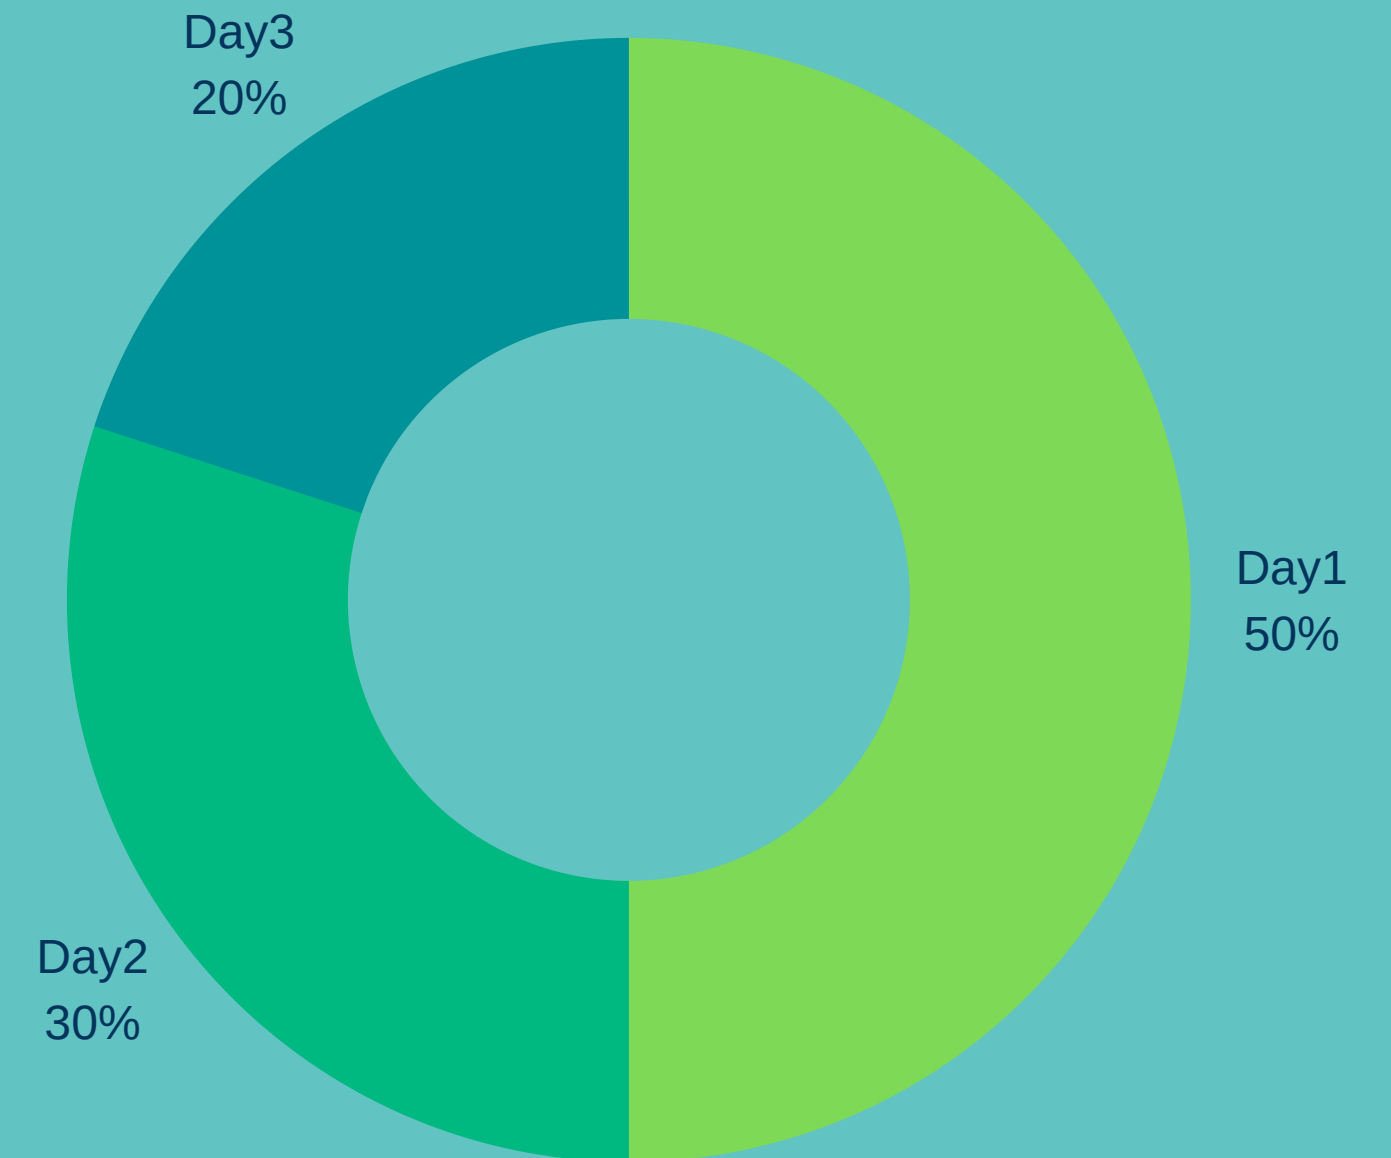

## FULL BACKUP SOLUTION

- The second server is to backup all your data remotely in another office or another building that is connected to the same LAN or wide network that is connected from WAN.  
(**Recommended**).

## INSTALLATION TIME

Depends on your system data size, mostly takes from 1-3 working days.

System downtime will arrange after the survey to be minimum as possible, mostly system downtime be a few hours, and the rest time for configuring the backup solution system will be up & running in that time.

## HANDLING

Training how to take a backup and restore it.  
How to monitor your backup system.
